

WATER RESOURCES RESEARCH GRANT PROPOSAL

Project ID: NE1581

Title: Information Transfer

Focus Categories: Education, None

Keywords: Groundwater, Bioremediation, Herbicides, Water Quality, Irrigation, Newsletter

Start Date: 03/01/2001

End Date: 02/28/2002

Federal Funds: \$19,000

Non-Federal Matching Funds: \$44,220

Congressional District: 1

Principal Investigators:

Steven W. Ress

Professional Staff, University of Nebraska

Kyle D. Hoagland

Professor, University of Nebraska

Abstract

As research results supported by USGS and other state and federal agencies become available, it is critically important to inform the public, policy decision-makers, and water resource managers. In addition, federal, state, and private organizations, as well as industry and the general public need readily available information regarding contacts for water resource related questions and additional information, new federal and state policies, educational opportunities through the university, and other water-related issues. Thus, the primary aim of this Information Transfer Plan is to better inform citizens and agency personnel concerning water resource quality and quantity issues of health, economic, and esthetic importance. The specific objectives are to publish a newsletter (Water Current) six times during the year, including an estimated distribution of 4,000 copies, and to produce and publish special educational and informational materials dealing with timely and important water issues throughout the year using high quality graphics and print-quality materials.
